Hi Benjamin,

I am forwarding your question to our google group. They can assist with troubleshooting.

For the non-Ruby initiated, would you be able to help debug the following error message?
/System/Library/Frameworks/Ruby.framework/Versions/2.0/usr/lib/ruby/2.0.0/rubygems/specification.rb:2007:in `raise_if_conflicts': Unable to activate neo4apis-activerecord-0.7.0, because neo4apis-0.8.1 conflicts with neo4apis (~> 0.6.0) (Gem::LoadError)
I followed the above tutorial, executed the activerecord statement, but got the following error message:
/Library/Ruby/Gems/2.0.0/gems/neo4apis-activerecord-0.7.0/lib/neo4apis/model_resolver.rb:6:in `included': private method `include' called for Neo4Apis::CLI::ActiveRecord::Class (NoMethodError)

I couldn't find any help online, so I tried installing neo4apis with gem install. This installed the 0.8.1 version, which seems to conflict with the version expected by activerecords...
