Hi,

I am not a java expert and trying to write a server plugin. Following the examples on the web I did write something working but I can only return single type.

I can return list of nodes or list of integers but not list of nodes, strings, integers (all together in one response).

Thanks, Mehmet

Hi,

You can write unmanaged extension and return whole JSON Object - <http://neo4j.com/docs/stable/server-unmanaged-extensions.html>

Thanks,

Sumit
