Apr 27

Hello everyone,

We just launched Linkurious Enterprise, an enterprise-ready graph visualization software for Neo4j. It includes:

- revamped interface;
- possibility to filter nodes and edges based on properties, to combine filters;
- improved search engine (use Elastic syntax, search across multiple properties);
- customizable interface (set the size and colors of nodes and edges, choose icons);
- data edition;
- possibility to save visualization, to export visualization (csv, excel, gephi, png, svg), to share visualizations;
- authentication and access level management;
- ...

The idea is to make it possible for any organization using Neo4j to quickly deploy a data visualization platform to analyse data safely and collaboratively.

More about it here: <https://linkurio.us/announcing-linkurious-enterprise-the-first-data-visualization-platform-for-graph-databases/>

We have a new website and a new demo too: <https://linkurio.us>

We'd love to hear your feedback and the Linkurious team would be happy to answer all questions!

Best,
