

## logical logs and lucene logs

Hello,

I am running 2.2.1 enterprise. I changed the keep\_logical\_logs setting of the DB to false (in development). However, I still see old neostore.transaction.db.xx files. Is this simply because neo isn't cleaning the old files now that the new setting has been applied? Am I ok to delete those manually?

On a related note, what about the old lucene index logs? I have a LOT of those in production and even in development. will the keep\_logical\_logs=false setting also apply to the lucene logs? if not, how can I manage those logs? Thanks!
