First, I would to thank Neo4j team for the excellent work achieved on Neo4j 2.2.
By using Neo4j daily, I've begin a wishes list in order to improve again this fantastic product :

Finalize the dump function, to make them usable with any size of DB (it could be really really usefull to make Neo4j more "production ready")

Add a stored proceduresmechanisms in order to store the must used Cypher queries into the graph

Add a node or relationship executable properties , the idea here is an analogy to value functions in Scala, the possibilities to store an evaluated function into a property value in order to get the result of this function when the property is read by a Cypher query (it could be just a new value Type).

This last functionality could open a large way of data processing possibilities without leaving the Cypher langage.
