

## Neo4j 2.2, Accessing the JMX Bean via http

4 posts by 2 authors

Apr 14

In previous versions (1.8, 1.9..) the JMX bean was accesible via:

<http://localhost:7474/db/manage/server/jmx/query>

Any hint on where is this moved on 2.2 ?

Thanks :)

That still works, but maybe your request isn't authenticating right?

Hi Chris,

I turned authentication off via the properties.

is this affecting it?

The documentation is a bit frustrating [1]

it says :

"To enable this feature, you have to remove the # characters from the various `com.sun.management.jmxremote` options there."

well, there is none options with those names
