I attach two image file.  
I want to find nodeA\_subgraph(as attach) for that i used

```
START user=node(13), follower=node(14,15,16,17)
MATCH user-[:t1_orange|t2_violet|t3_green|t4_blue*1]->follower
RETURN user, follower
```

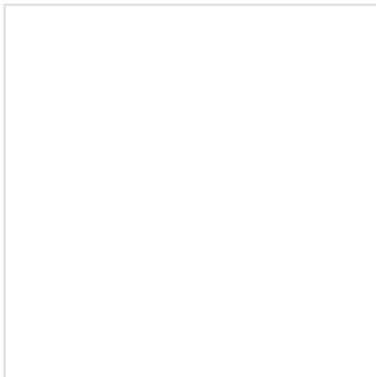

But, I got 2nd image not expected(as attach).

Can anyone tell me and modify my query to get sub graph for Node A in outgoing direction.

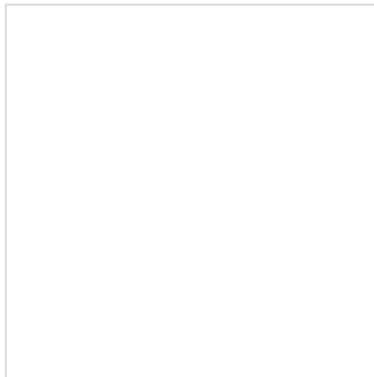

Thanks in advanced

Hi Monica, it seems that in the 2nd image you forgot the outgoing direction ">" in the console.

Rita
