Collaborator

The harness makes it easier to write randomised page cache tests, and also tries to help with debugging when the tests fail.

A couple of tests have also been rewritten to make use of it.

Along side this work, the amount of work done in the

`PageCacheTest.concurrentPageFaultingMustNotPutInterleavedDataIntoPages` has also been reduced, so it's not so prone to timeout on virtual machines where context switching is much more expensive.
