Neo4j crashes all the time randomly

I just started playing with neo4j 2.2 and am seeing random crashes of the instance frequently when I run cypher queries. I have a 10GB database that has 15m nodes and 150m relationships. My server is pretty beefy..250 GB ram and 1 TV SSD. If u restart the instance and run the same query again it works. So am guessing that it's not managing available memory correctly. I have set the pagecache.memory setting to 20g but still no luck. I thought the default setting means take 75% of available memory. Anything else I need to order try? Java heap size is set to 512mb and I can't increase it beyond 1gb coz instance fails to start with heap too big error.
