Hi all, I need hierarchical clustering algorithm in neo4j. I've 1 million records of dataset . Can anyone suggest me how can I do this using neo4j.

Thank you!!

Hi,

Assuming you are talking about NLP/Machine Learning, there are libraries written by Kenny Bastani that you could take a look at. (I haven't used them.) Alternately, you could whip up your own lib in whatever language you want and store the resultant cluster in Neo4j.
