Re: [Neo4j] GraphGist - Use local Database

Michael Hunger   Apr 23

Currently you can connect to a local Neo4j console: ala:console.neo4j.org

You have to clone and run it locally: https://github.com/neo4j-contrib/rabbithole

and then use :neo4j-version: local in the gist

I wrote a small script for that: https://gist.github.com/jexp/70296ce410ff431ddbef

The console can mirror and forward a local server (using a command line param) but I wanted to add Neo4j Server support to GraphGists for a long time.

HTH,

Cheers, Michael
