Asking for Feedback on successful Neo4j Integrations with other software

Hello everyone,

as we are getting more and more requests from people wanting to integrate with other software (e.g. other databases, BI/DWH tools, (big) data processing/compute, visualization, auditing software and much more), both with Neo4j as source or sink.

I wanted to reach out to you, to ask for feedback.

If you successfully integrated Neo4j with a more widely used third party software we'd love to read about it.

Please either take a few minutes and write down your approach as a blog post and send the text or the link or just let know me via email and we follow up on it.

We want to document and link some of those approaches on our developer pages too, so others have an easier time getting started.

This will also show us where the highest demand and the biggest shortcomings lie so that we can adapt our future planning.

Thanks so much for your support,

Cheers, Michael
