Hi ,

I want to have a search in the following way:

suppose I have a "Description" field in a node having text "hello world!"

Now **when I search using the input : "hello wo" . It works properly but when I search with "hel wo" it doesn't work so how can I do such kind of search**.

currently I am using follwing query :

MATCH(node : Node) where node.Description=~ "(?i).*who mo.*" RETURN node.Description

Thanks.

You should read up about regular expressions.

> **MATCH(node : Node) where node.Description=~ "(?i).*hel.*wo.*" RETURN node.Description**
