Neo4j-Import Shell

Dear All,

I'd like to import the data using the neo4j-impot tools.

And I used the shell command:
$Neo4j_Home$/bin/neo4j-import --into /Neo4j/data/201407MD/ --nodes node-header.csv,node.csv --relationships relationship-header.csv,relationship.csv

But I've got the error. The messages.log is attached.

My re-exam my csv file several times and cannot find the reason.

Can anybody help me with this issue?

Thanks!

Best Regards!
Yours, Jesse

You seem to have 2^16 (65536) or more different relationship types, neo4j doesn't support that. Is that intentional in your dataset?
