Import/Export graph to file (.csv)

Hello,
I have a problem with importing/exporting data from file.
I need to be able to save query's results to file and import from other file (create all nodes from file as new nodes in db and make connections between them).

Any help would be really appreciated.

Thanks

The browser has an download / export to CSV button.

You can then use LOAD CSV to load that CSV again into a different graph shape.

Cheers, Michael
