Not plugged into the manual, since NDP is not plugged in. In the interim we use asciidoctor to generate the html for review. To generate the docs:

```
cd community/ndp/messaging-v1 && mvn package
open target/messaging-manual/html
```

For the doc content, should Serialization Layer comes after Message Layer?

```
TCP connection -> the way server-client talks
Message layer -> how do we send queries and query results as messages + failure handling
Serialization layer -> how do we decode/encode the content of the messages that we got fro
```

jakewins commented Apr 22, 2015   Collaborator

@zhenlineo yeah, the serialization and the messaging really go hand-in-hand - the separation really is about semantics rather than protocol layering, isn't it. Perhaps calling it layering is overloaded then - there's a transport layer and a messaging layer, and the messaging layer section is divided into two parts. One about semantics of messages, and one about the physical representation of them.

So like this:

- Transport Layer
- Message Layer
- Message serialization
- Examples

Besides my comment on `HexPrinter` , the doc part looks good to me.

Introduce protocol documentation ···   262cc69
