nodejs unit test stubs with neo4j

▲

▼

★

Anyone know of a way to spin up a neo4j instance for testing?

We're using Nodejs + Neo4j, with minimal unit tests which I'd like to change.

NosqlUnit looks promising but its dependant on JUint to run.

The Neo4j class `com.lordofthejars.nosqlunit.neo4j.InMemoryNeo4j` sounds fantastic. But I cant find any info on Google or Stackoverflow. Could this potentially be invoked by Java or Scala while running my tests in Nodejs?

Any help hints tips or tricks welcomed.

Update

I think using nodejs & sails-memory is a good option. As the main concern is testing the application layer. Using the waterline orm will allow me to swap databases for testing purposes.

node.js   neo4j   sails.js   waterline
