Upgrading from Neo4j 2.1.7 to 2.2.0

1

I was using Neo4j 2.1.7 without any problems. Beside running Cypher queries in the web client provided by Neo4j, I also played with the Java API in a Maven project where I created some nodes and relationships. All worked fine.

My problems began when I decided to upgrade to version 2.2.0. First, I unistalled the older version, and installed the newer one which is 2.2.0. I started the server:
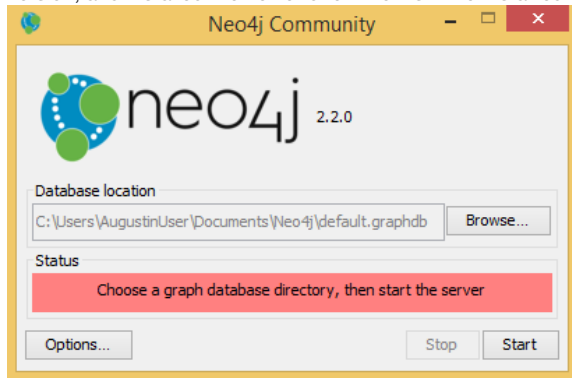

I tried to run a simple query and got 'Unknown Error':
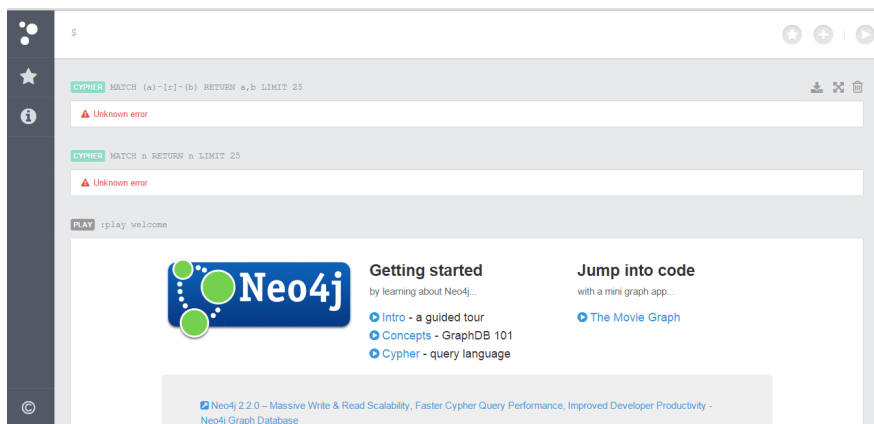

At first I thought that the database located at C:\Users\AugustinUser\Documents\Neo4j\default.graphdb was from the previous version, so I deleted it and created a new one that would comply with version 2.2.0. But I get the same error. Need some help. Thank you!

java   maven   neo4j

I had similar problem after upgrading too. Try clear cache of your browser. Push `CTRL` + `F5` .

To upgrade your existing data, make a backup and then. Enable `allow_store_upgrade=true` in the neo4j.properties file (Under `Options`)

Shift+Reload helps with the browser.

Is Spring Data Neo4j 3.3.0.RELEASE compatible with Neo4j 2.2.0? – geceo Mar 31 at 8:23

@geceo Looks like SDN 3.3.0.RELEASE & 4.0.0.M1 reference neo4j v2.1.7. Check out the neo4j.version property in the project: github.com/spring-projects/spring-data-neo4j/blob/3.3.0.RELEASE/… && github.com/spring-projects/spring-data-neo4j/blob/4.0.0.M1/… – Tommy Adamski Apr 6 at 13:19 ✏
